

Data 607 - Project 2

Dataset 1: Powerball data

Nicholas Chung, Joe Rovalino, T. Jenkins

Contents

Data	1
Clean and Tidying	3
Analysis	448

The goal of this assignment is to give you practice in preparing different datasets for downstream analysis work.

Your task is to:

- (1) Choose any three of the “wide” datasets identified in the Week 6 Discussion items. (You may use your own dataset; please don’t use my Sample Post dataset, since that was used in your Week 6 assignment!)

Relevant Information:

The Powerball lottery was loaded into MySQL DB and describes Powerball winning numbers over a period of Feb 3rd to the present. (1) Created a MySQL database that includes all of the information above. - CHOSE to load to MySQL and use the lesson from homework 2 to create DB. (2) Read the information from your .CSV file into R, and use tidyr and dplyr as needed to tidy and transform your data. (3) Perform analysis to compare the numbers in the various position of the powerball winning number. (4) Code will be in an R Markdown file, posted to rpubs.com, and will include narrative descriptions of your data cleanup work, analysis, and conclusions. We will include in our project submission: * The URL to the .Rmd file in your GitHub repository. and * The URL for your rpubs.com web page.

Data

Initial observations on state of raw data: * we know that there is variance in header count, where data from 2012 to 2014 has one less header “Power Play” * rows that represent drawings from 2012 to 2014 have value “0” where header is “Power Play” / column position is 11 * column 1 is not useful

Observations on both data sets collected so far: * after omitting rows with missing data, there is row count parity * “estimated jackpot” column contains values that require transformation into numeric representation * “jackpot option” column contains “CVO” value, which indicates whether the winner took the lump sum over annual payments * “winning numbers” column headers will require transformation in unique values by position * in “jackpot winners” column, value “roll” indicates a roll-over, where no winner was selected (ref: https://answers.yahoo.com/question/index?qid=20110429210210AA8Y824&guccounter=1&guce_referrer=aHR0cHM6Ly93d3cuZWNVc2lhLm9yZy8&guce_referrer_sig=AQAAAB6jQ-NGhdyMOMlFbNTSrAgIkL-1JtAQoQyaGrwCWYspY8f3mDVzHJjsZ0enRMo17Ww9cYAZc2fmACI5veEM03FoI_h1lC). * where “jackpot option” value is “CVO”, it is also possible to spot a value indicating the number of “jackpot winners”

MySQL

```
db_user <- 'root' db_password <- getPass::getPass("Enter the password:") db_name <- 'data607proj2'
db_table <- 'powerball' db_host <- '127.0.0.1' # for local access db_port <- 3306

mydb <- dbConnect(MySQL(), user = db_user, password = db_password, dbname = db_name, host =
db_host, port = db_port)

s <- paste0("select * from", db_table) rs <- dbSendQuery(mydb, s) df <- fetch(rs, n = -1)
on.exit(dbDisconnect(mydb))
```

df

Tidyr

We want “jackpot winners” and “jackpot_options” tidied such that:

- “outcome”: roll, out of state winner, CVO
- “winner_count”: number of winners

```
# cast win, type of winner, and number of winners
casted.winnings <- clean.winnings %>%
# pivot_wider(names_from = "jackpot_winners", values_from = "jackpot_winners") # Requires dev version
# workaround
gather(names_from = "jackpot_winners", values_from = "jackpot_winners")
library(fastDummies)
dummy_winners <- dummy_cols(casted.winnings$value)
casted.winnings$key <- dummy_winners[,2]
casted.winnings$value <- dummy_winners[,3]
casted.winnings$value2 <- dummy_winners[,3]
head(dummy_winners)
```

##	.data	.data_Roll	.data_Out of State Winner	.data_1

```

Analysis

Questions:

- Distribution of numbers (how “random”/normally distributed is number selection?)
- What is distribution of jackpot outcomes?
- How has growth of jackpot size between wins changed over time?

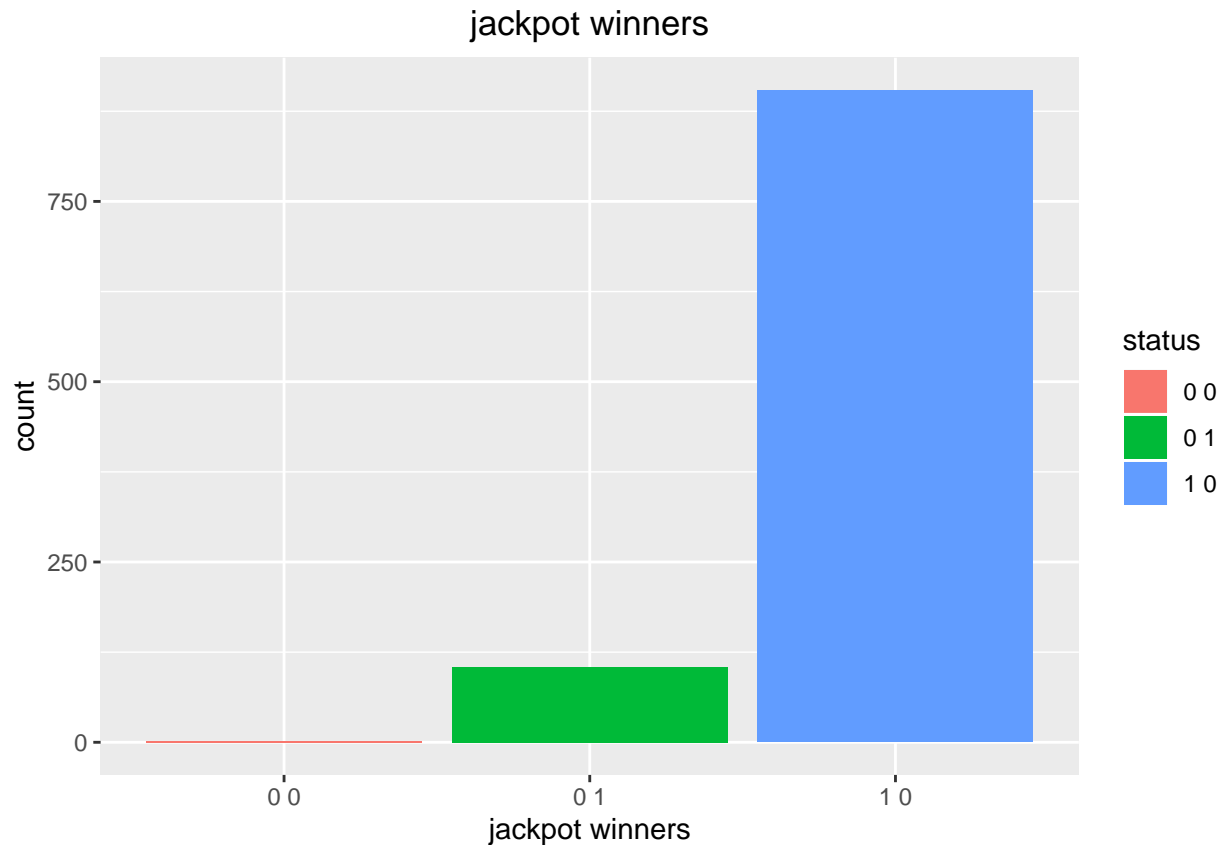

Group the data by position

Determine number value and count occurrence of number in the position.

```
library(ggplot2)
jkpt_temp <- pb_df %>% group_by (status) %>% summarize (n())
# rename headers
names(jkpt_temp) <- c("status", "count")
head(jkpt_temp)
```

```
## # A tibble: 3 x 2
##   status count
##   <chr>  <int>
## 1 0 0      2
## 2 0 1    104
## 3 1 0    904
```

```
ggplot(jkpt_temp, aes(fill=status, y=count, x=status)) +
  ggtitle("jackpot winners") +
  theme(plot.title = element_text(hjust = 0.5)) +
  geom_bar(position='dodge', stat="identity") +
  xlab('jackpot winners') +
  ylab('count')
```

Frequency position integers

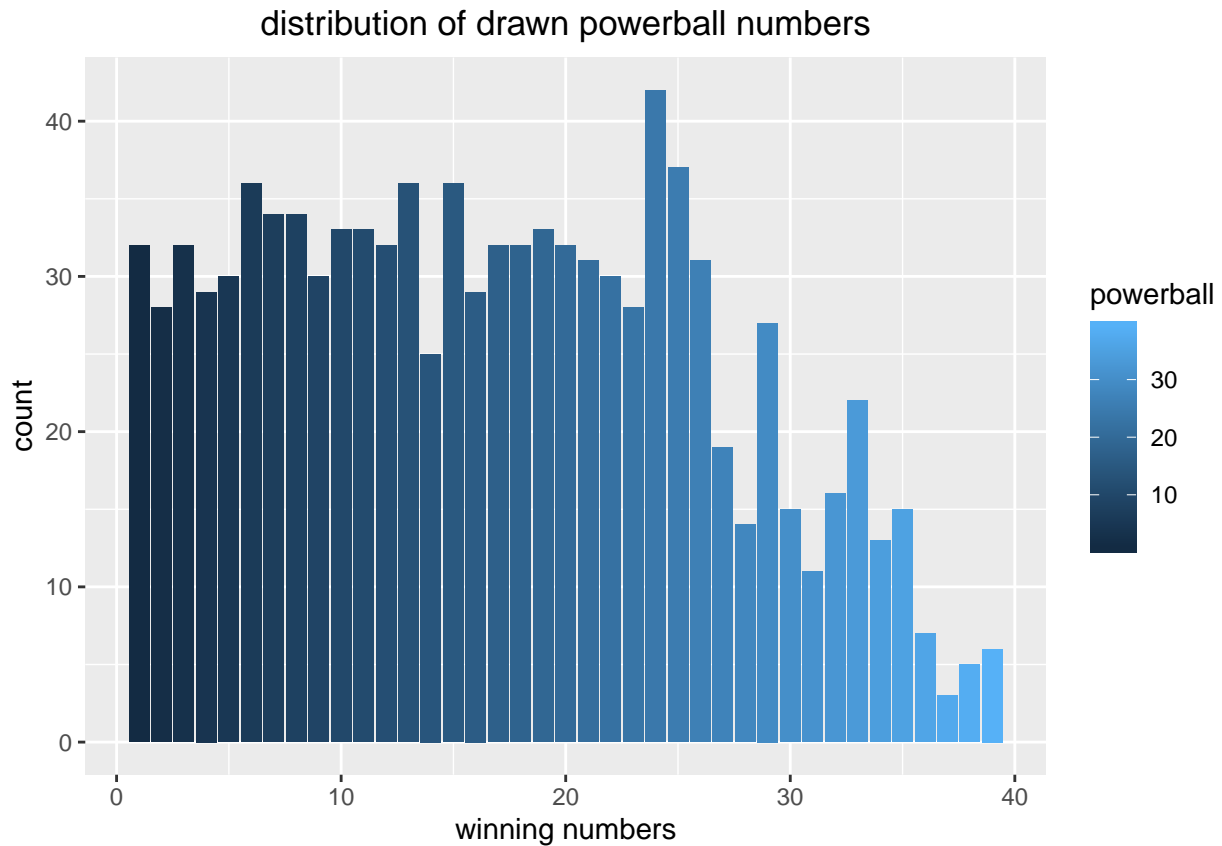

```
freq_num1 <- pb_df %>% group_by (num1) %>% summarize (n())
freq_num2 <- pb_df %>% group_by (num2) %>% summarize (n())
freq_num3 <- pb_df %>% group_by (num3) %>% summarize (n())
freq_num4 <- pb_df %>% group_by (num4) %>% summarize (n())
freq_num5 <- pb_df %>% group_by (num5) %>% summarize (n())
freq_powerball <- pb_df %>% group_by (powerball) %>% summarize (n())
```

```
# rename headers
names(freq_powerball) <- c("powerball", "count")
head(freq_powerball)
```

```
## # A tibble: 6 x 2
##   powerball count
##   <int> <int>
## 1         1    32
## 2         2    28
## 3         3    32
## 4         4    29
## 5         5    30
## 6         6    36
```

Distribution of drawn powerball numbers

```
ggplot(freq_powerball, aes(fill=powerball, y=count, x=powerball)) +  
  ggtitle("distribution of drawn powerball numbers") +  
  theme(plot.title = element_text(hjust = 0.5)) +  
  geom_bar(position='dodge', stat="identity") +  
  xlab('winning numbers') +  
  ylab('count')
```

Jackpot size over time

```
ggplot(data=pb_df, aes(x=draw_date, y=est_jackpot, group=1)) +  
  ggtitle("jackpot size over time") +  
  theme(plot.title = element_text(hjust = 0.5)) +  
  geom_line(color="red") +  
  xlab('time') +  
  ylab('jackpot size, in $')
```
